hello randy,

i apologize for the delayed response - we were supposed to respond friday 6/2 but i only just received the information below and attached from our pacific northwest region this afternoon.

for the monuments overlying some bureau of reclamation lands, we only have one area where there is responsive information to your may 11 data call, and that is cascade-siskiyou national monument.

for that monument, our regional office relays that Reclamation is producing hydropower and we do have critical infrastructure within the Cascade Siskiyou monument boundary at Keene Reservoir.

the attached map shows the expanded boundary in relation to Reclamation's managed facilities. While Green Springs was not in the original monument boundary, supporting facilities were. With the expansion it would appear that the powerplant is now within the boundary of the monument.

while we do not have information on the expanded monument boundary (designated in january 2017) impacting energy development as envisioned in your may 11 data call document, we felt we should still pass along the map.

this is in response to question 2(b) from your "initial data request" document circulated on may 11.

please let me know if you have any questions, and apologies for the late submittal.
thx

- mat
